## Service Manual

LIQUID CRYSTAL DISPLAY TELEVISION

LT-3280 (LT-3280D) LT-3780 (LT-3780D)

The LT-3280 includes the LT-3280D, monitor and HD-4001, receiver/controller. The LT-3780 includes the LT-3780D, monitor and HD-4001, receiver/controller. This manual covers the LT-3280D and LT-3780D, monitors. For the receiver/controller, see the HD-4001 Service Manual.

#### **CAUTION:**

Before servicing this chassis, it is important that the service person read the "SAFETY PRECAUTIONS" and "PRODUCT SAFETY NOTICE" contained in this manual.

#### **SPECIFICATIONS**

• **Power** : AC 120V, 60Hz

[LT-3280D] 200W [LT-3780D] 300W Standby <5W

• LCD Panel : Size/Resolution -

[LT-3280D] 32" diagonal, 16:9 / 1366x768 [LT-3780D] 37" diagonal, 16:9 / 1920x1080

: Pixel Pitch -

[LT-3280D] 0.519mm x 0.173mm x RGB [LT-3780D] 0.4275mm x 0.1425mm x RGB

• Input Jacks : MonitorLink™ Audio/Video - HDMI™

: MonitorLink™ Control - RS-232C
 : PC Video - VGA /Mini D-sub 15 pin
 : PC Audio - 3.5mm Mini-Jack

• Speakers : 2 Way Bass Reflex Left & Right (2 X 5W)

#### PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in television receivers have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc.

Replacement parts which have special safety characteristics are identified in this service manual.

The replacement for any safety part should be identical in value and characteristics.

#### **SAFETY PRECAUTIONS**

**NOTICE:** Observe all cautions and safety related notes located inside the receiver cabinet and on the receiver chassis.

#### **WARNING:**

- Operation of this receiver outside the cabinet or with the cover removed presents a shock hazard
  from the receiver's power supplies. Work on the receiver should not be attempted by anyone who is
  not thoroughly familiar with the precautions necessary when working on high voltage equipment.
- 2. Do not install, remove or handle the LCD panel in any manner unless shatterproof goggles are worn. People not so equipped should be kept away while the panel is being handled. Keep the panel away from the body while handling.
- 3. When service is required, observe the original lead dress. Where a short-circuit has occurred, replace those components that indicate evidence of overheating.

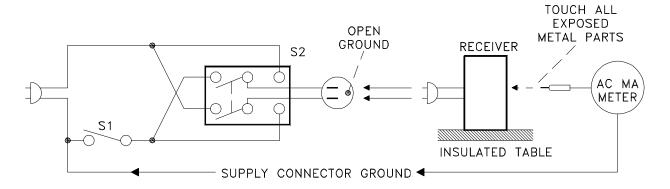

#### Leakage current check

Before returning the receiver to the customer, leakage current should be measured using following methods.

#### Cold Check

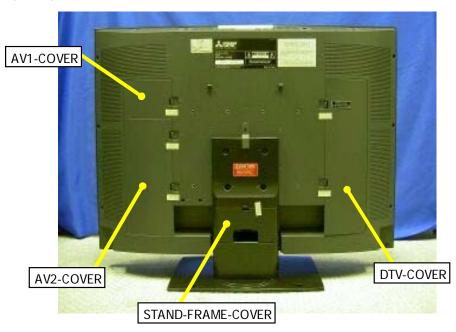

With the alternating current (AC) plug removed from the AC source, place a jumper across the two AC plug prongs. Connect one lead of an ohm meter to the AC plug and touch the other lead to each exposed metal part (i.e. antennas, handle bracket, metal cabinet, screw heads, metal overlay, control shafts, etc.), particularly any exposed metal part that has a return path to the chassis. The resistance of the exposed metal parts having a return path to the chassis **should be a minimum of 1Meg Ohm**. Any resistance below this value indicates an abnormal condition and requires corrective action.

- 2. Hot Check ... Use the circuit shown below to perform the hot check test.
  - 1. Keep switch S1 open and connect the receiver to the measuring circuit. Immediately after connection, and with the switching devices of the receiver in their operating positions, measure the leakage current for both positions of switch S2.
  - 2. Close switch S1, energizing the receiver. Immediately after closing switch S1, and with the switching devices of the receiver in their operating positions, measure the leakage current for both positions of switch S2. Repeat the current measurements of items 1 and 2 after the receiver has reached thermal stabilization. The leakage current must not exceed 0.5 milliampere (mA).

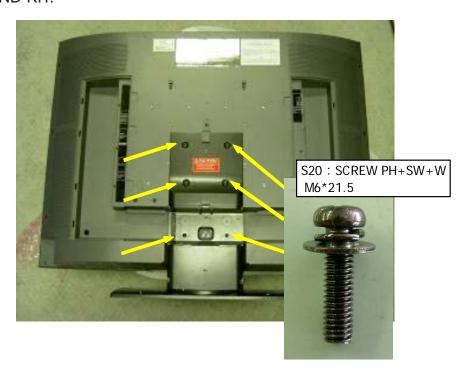

#### **DISASSEMBLY & PANEL REPLACEMENT PROCEDURE**

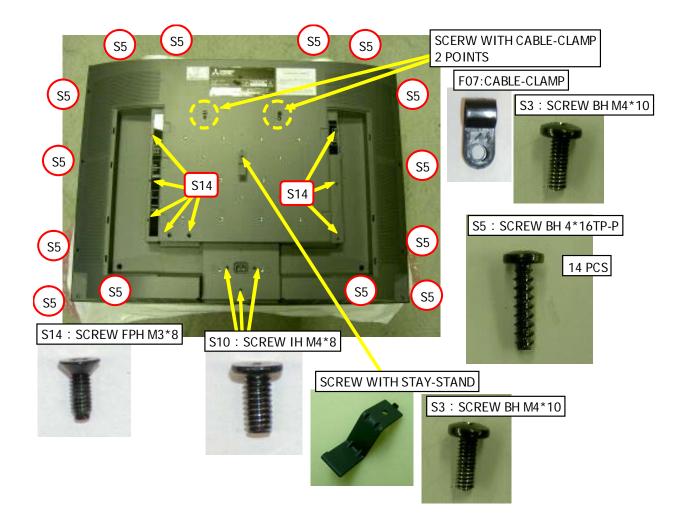

1. REMOVE AV1, AV2, DTV & STAND COVERS.

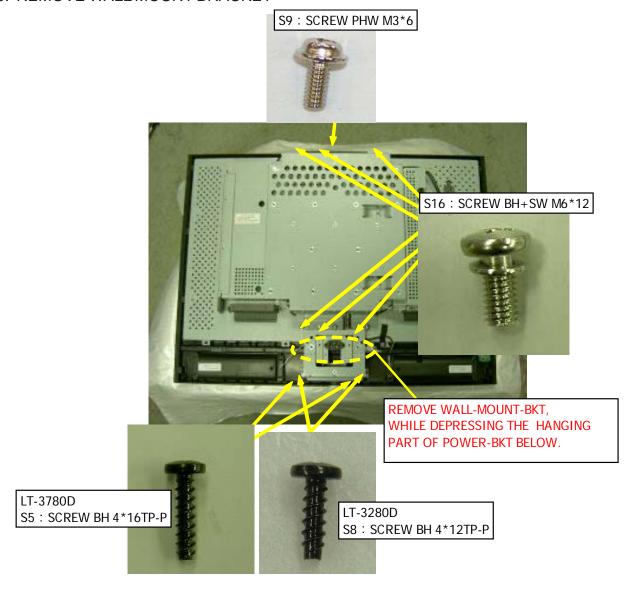

- 2. PLACE SET FACE DOWN ON A SOFT CUSHION, WITH THE STAND HANGING OVER THE EDGE OF THE TABLE.
- 3. REMOVE STAND-KIT.

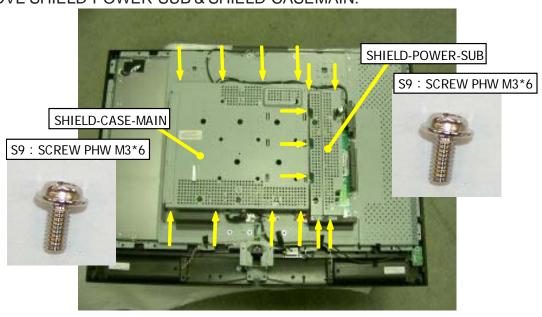

#### 4. REMOVE BACK COVER KIT.

#### 5. REMOVE WALL MOUNT BRACKET

#### 6. REMOVE SHIELD-POWER-SUB & SHIELD-CASEMAIN.

#### **Initial Setup**

#### A. Option Menu Setup

Follow the steps below for the initial set-up:

- 1. Disconnect the HD-4001.
- 2. Place the Remote control in the "TV" layer.
- 3. Select the "MENU" display by pressing the "TV MENU" button once.
- 4. Press the number buttons "2", "0", "7", "0" in sequence to select the "OPTION MENU" display.
- 5. Press the "ADJUST▲▼" buttons to select "INITIALIZE."
- 6. Press "ENTER."

<MENU><2-0-7-0>

NOTE: At this time all Menu and Audio/Video user setting are set to the defaults shown in the chart below.

#### B. Default Settings

#### Circuit explanation

#### 1. Video circuits

It explains the video circuits of LT-3780,LT-3280(Model name of display side only: LT-3780D,LT-3280D).

It corresponds to various inputs (PC, Monitor Link<sup>TM</sup> A/V Input).

It explains the composition and its function of an video circuit.

(Refer to an attached "Video block diagram of LT-3780D, LT-3280D", regarding as the flow of video signal.)

#### 1-1. Video input circuit of PC

In PC input, it is inputted into IC400 of the signal processing IC via Following IC

(A) IC203 : Analog-to-digital conversion IC (AD9888KSZ-170 : Analog devices)

The video signal (R, G, B) of PC input is changed into a digital signal (8 bits each) from an analog signal. Moreover, by this IC, it has the function below besides digital conversion.

- Contrast adjustment for PC
- brightness adjustment for PC

This IC is controlled by register control of IC203 via 3.3V IIC-bus to MPU(IC700)

(B) IC201: Invert IC with the Schmidt trigger (74LCX14: Fairchild)

It is IC which inputs the horizontal sync signal and vertical sync signal of PC input.

Since there are what has a bad rising and falling characteristic and what has low amplitude in the sync signal outputted from PC, it is necessary to modify the waveform.

It corresponds to the above-mentioned waveform as follows by this IC.

- a bad rising and falling characteristic. : Rise-time and fall-time is carried out early.
- a waveform is noisy : It prevents that the mistaken pulse occurs by the Schmidt circuit.
- Low Amplitude : If voltage threshold is satisfied, high level will output in 3.3V.

Since 74LCX14 is a invert circuit, if its gate pass twice and it has united polarity.

(C) IC200 : 1K-bit EEPROM (24LC21ATI : Microchip)

This is the IC for EDID of PC.

This IC has important information about PC input such as product code, serial number, video specification, proposed timing, color information etc.

(D)IC202 : AND-circuit IC (SN74LVC08APWR: Texas Instruments)

This IC is to disable the H, V sync signal line connected to IC which power supply is dropped while stand-by. It can operate correctly by using this.

This is controlled by ENABLE singular from MPU(IC700) (L: disable)

(E)IC204 : D Flop-Flop IC(TC74VCX74FT : TOSHIBA)

The role of this IC is to synchronize H sync signal and V sync signal.

For output signal of IC203, H sync is synchronized by dot-clock from IC203, but V sync is not Synchronized by H sync. This IC uses to be operated without miss-operation.

(F)IC2A0 : Color conversion IC(M66471FP: Mitsubishi)

This IC uses to perform Color conversion function such as PerfectColor, Colorview.

(G)IC2A1 : TMDS-Transmitter IC(SII160CTG100 : SiliconImage)

This IC uses to convert signal's specification from TTL to TMDS (differential signal).

Since the input port of latter IC (IC400: Signal processor) could use only the TMDS input, this input specification was united by this IC.

#### 1-2. Video input circuit of Monitor Link<sup>TM</sup> A/V Input

In Monitor Link<sup>TM</sup> A/V Input, it is inputted into IC400 of the signal processing IC via Following IC.

#### (H)IC500 : HDMI-Receiver IC ((SII9993CTG100 : SiliconImage)

This IC uses to receive and correspond the differential signal. This IC corresponds not only HDMI input but also DVI input(TMDS interface). Supported timing of this input is 480P/1080i/720P.

The output format of this IC is YCbCr4:4:4, not RGB.

(I) IC501 : 2K-bit EEPROM (24LC22ATI : Microchip)

This is the IC for E-EDID of Monitor Link<sup>TM</sup> A/V Input.

This IC has important information about Monitor Link<sup>TM</sup> A/V Input such as audio, speaker,

Identification code, in addition to product code, serial number, video specification, proposed timing, color information.

#### 1-3. Signal processor circuit

#### (J)IC400 : Signal processor IC (gm1601-LF-CF : Genesis)

By this IC, it has the function below.

- Scaling for all inputs.
- PIP/POP/PAP control for all inputs
- Auto setup for PC
- Frequency measurement / distinction for all inputs
- Color space conversion (YPbPr → RGB)
- Motion Adaptive De-Interlacer.(480i/1080i)
- Color / tint control the input signal except PC input.
- 3 dimension Noise reduction.
- Adaptive Film Mode (24Hz → 30Hz)
- Gamma correction
- Contrast and brightness adjustment for COMPONENT
- OSD mixing

This IC is controlled by register control of IC 400 via 5-lines serial communication.

The output format of this IC is LVDS data stream (differential signals).

In 28 bits, 24-bits digital video signal and horizontal sync signal, vertical sync signal, and an enable signal and a clock signal for LCD panel are pointed out.

A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. And this output is sent to LCD panel through CNF1.

#### (K)IC405 : 4M bit Flash Memory(PM39LV040-70JCE : PMC)

This IC is installed the firmware of IC400(gm1601), helps that IC400(gm1601) serves as another MPU. (This model operates by 2 MPU)

#### (L)IC403 : 128M-bit DDR SDRAM

(HY5DU283222AFP-36, HY5DU283222AF-36: HYNIX• ANT5DS4M32EG-5 32809BPT: NANYA) This IC is used as external frame buffer of IC400(gm1601), provides the storage required for the frame rate conversion process and integrated OSD.

#### 2. Audio circuits

It explains the audio circuits and speaker system of LT-3780,LT-3280.

Our design spec is as follows.

- Power outputs: Total 10W(5W\*2(L,R))
- Impedance: 8+/-1.2 ohms
- Compact sound 2 way bass reflex speaker box.

(Refer to an attached "Audio block diagram of LT-3780, LT-3280", regarding as the flow of audio signal.)

#### 2-1. Audio process circuits

(M)IC301: Audio processor IC (MSP3440G: Micronas)

This models are used the MSP3440G as the audio processor.

This IC's functions are as follows.

- Volume control
- Tone control
- Surround
- L/R mixing
- Audio line output

This model has some sound effect features on user menu, Bass, Treble, Balance, Surround, Level Sound.

Audio adjustment of those in this model is performed by this IC.

#### 2-2. Audio amplifiers circuits

(N)IC370, IC380 : Single Ended Audio Amplifier IC (MP7720DS-Z : MPS)

This model apply digital Audio Amplifier in order to decrease power consumption.

This amplifier voltage is 14V and SAMPVCC(for Sub Woofer)).

#### 2-5. Speakers

No.	ITEM	SPECIFICATION
1	Nominal	8 ohms +/- 1.2%
2	Lowest Resonance	180 +/- 36Hz
3	Effective / Rated	F0~20KHz
	Frequency Range	OUT PUT SPL-10dB
4	Rated Input	10W
5	Maximum Input	15W

#### 3. Power circuit

For power supply of LT-3280D and LT-3780D, there are the power supply of "always on" and "ON/OFF" with a control signal.(Refer to BLOCK POWER.pdf)

PCB	Power	Voltage	"always on"	Control	Output	Note
	source	[V]	or "ON/OFF"	signal	$\overline{\text{IC}}$	
	signal					
POWER-	120V	120V	ON/OFF	Psave1		For inverter.
SUB1						Only 37"
POWER-	24V	24	ON/OFF	Psave1		For inverter.
SUB2						Only 32"
POWER	24V	24	always on	-		For MAIN
	18V	18	ON/OFF	Psave4	IC9B5	Only 37"
	P5V	5	ON/OFF	Psave4	IC9B6	Only 32"
	S8V	8	always on	-	IC9B4	
	S5V	5	always on	-	IC9B7	
	S3.3V	3.3	always on	-	IC830	
	AMPVC	17	ON/OFF	Psave3	IC9B3	
	$\mathbf{C}$					
	4.5V	4.5	ON/OFF	Psave2	IC9B2	
MAIN	A3.3V	3.3	ON/OFF	Psave2	IC9000	
	D3.3V	3.3	ON/OFF	Psave2	IC9010	
	AD3.3V	3.3	ON/OFF	Psave2	IC9020	
	D2.5V	2.5	ON/OFF	Psave2.5	IC9030	
	A1.8V	1.8	ON/OFF	Psave2.5	IC9040	

#### (O)IC9A1, IC901(Only 32") :

Power supply control IC(power factor correction) (FA5500/FA5501: FUJI)

This IC are control IC for a power factor correction converter using critical conduction mode of operation. This IC performs a power factor correction by conversion the current waveform from triangle waveform to sine waveform. This IC and circuit is the same as LT-4260.

(P)IC9A2, IC902(Only 32") : Power supply voltage control IC (F9222 : FUJI)

This IC controls the power supply voltage by switching about 75KHz.

This IC has MOSFET inside IC, keep switching on and off, and controls its duty to be stable output voltage. This IC and circuit is the same as LT-4260.

(Q)IC920(Only 37") : Power supply voltage control IC (STR-G9628 : SANKEN)

This IC controls the power supply voltage by switching above 50kHz.

This IC has MOSFET inside IC, keep switching on and off, and controls its frequency to be stable output voltage. And the duty is determined by input AC power voltage.

#### 4. Protection Circuit

LT-3280D and LT-3780D has two protection circuits and some fuses.

If the protection circuits work, The LCD turns to stand-by mode.

The protection operation can be confirmed by the blinking of the blue power LED.

And the content can be confirmed by the number of blinking within one cycle.

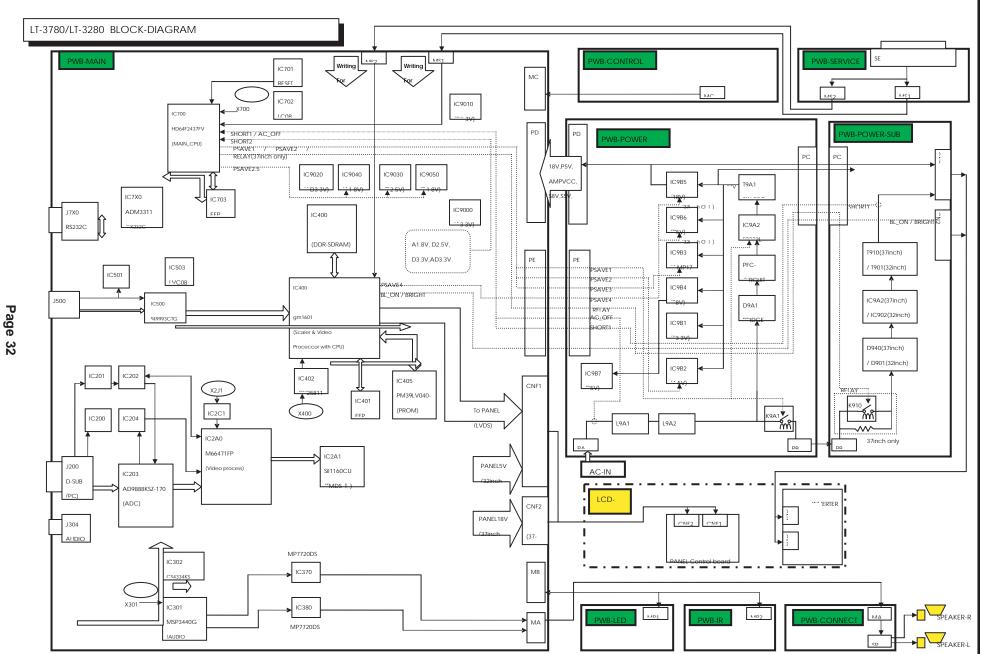

The following table shows the content of the operation.

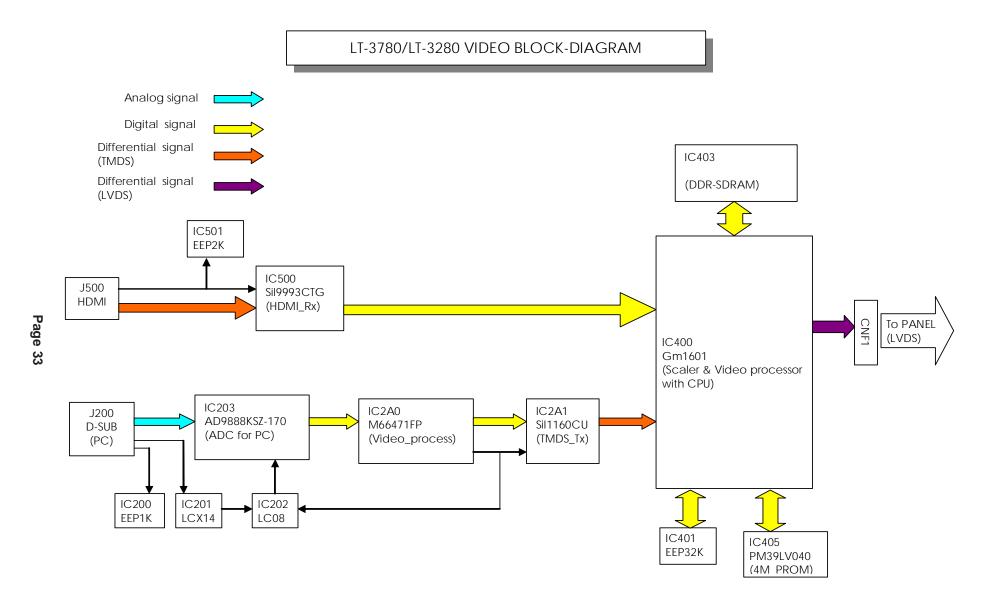

Protection Circuit:

Name	Number of blinks	Fault Location	Cause	Remark
Short1	1	POWER-SUB1 or Panel	Excessive current on the 120V line.	Only LT-3780D
		POWER-SUB2 or Panel	The 24V line on the POWER-SUB2 is low.	Only LT-3280D
Short2	2	POWER or MAIN or Panel (Only 18V or P5V)	The voltage on any of the following output lines is low.	Check the fuses on POWER board.
			18V P5V	(F9G2,F9G3, F9G5~F9G8)
			AMPVCC (17V) 4.5V	
			A3.3V D3.3V	
			AD3.3V D2.5V A1.8V	

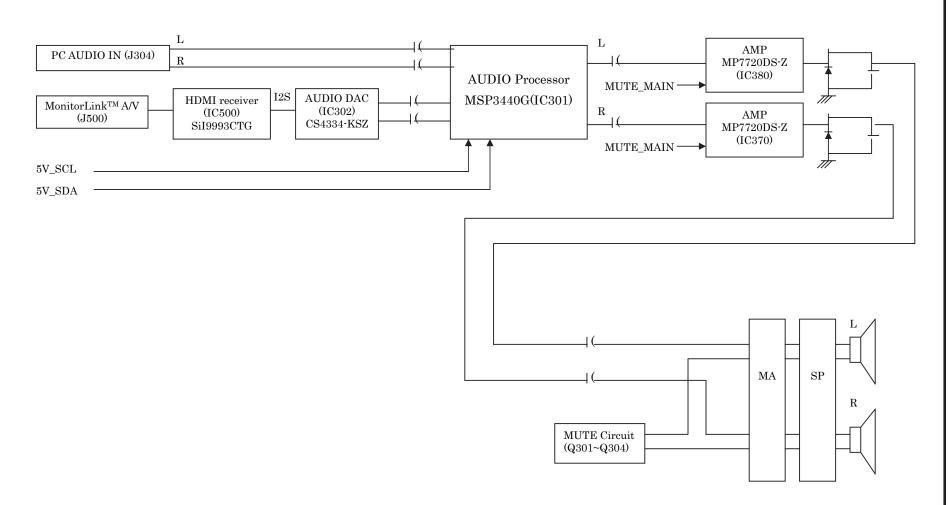

Fuses:

Part No.	Rated	PCB	Remark
	Value		
F9A1	6.3A	POWER	AC line
F9G2	500mA		S8V line ,S8V line for S5V
F9G3	1A		24V line for S8V and S5V.
F9G4	500mA		24V line for S3.3V and D1.8V.
F9G5	1.6A		24V line for AMP VCC.
F9G6	4A		24V line for 18V.
F9G7	1A		24V line for P5V.
F9G8	500mA		24V line for 4.5V.
F910	1A	POWER-SUB1	IC920 is broken.

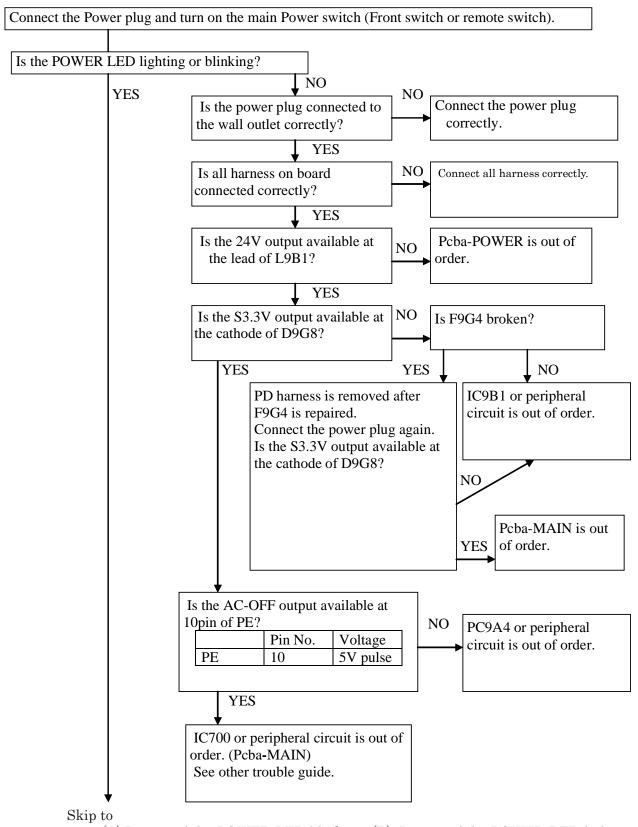

#### AUDIO CIRCUIT BLOCK-DIAGRAM for LT-3780/LT-3280

#### **Troubleshooting**

#### 1. Power failure

#### (1)POWER is turned off.

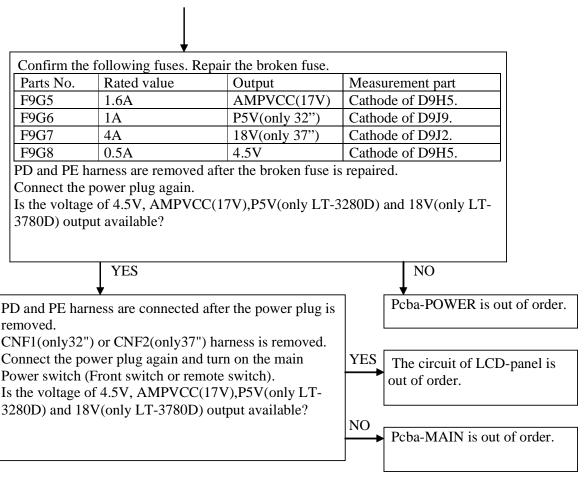

(A):In case of the POWER-LED blinking, (B): In case of the POWER-LED lighting.

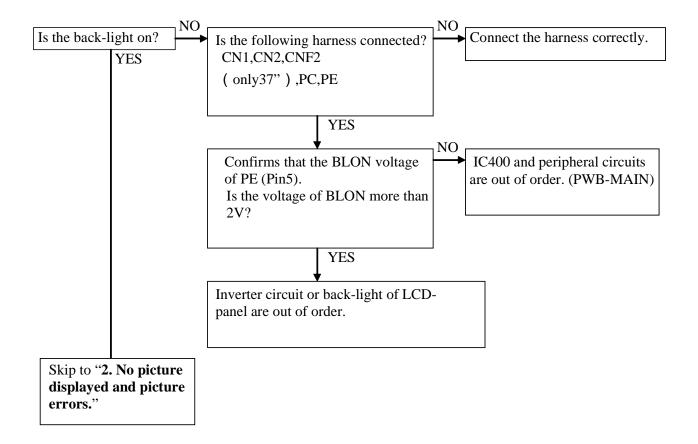

#### (A) In case of the POWER-LED blinking.

# CN1 and CN2 harness are removed. Connect the Power plug again and turn on the main Power switch (Front switch or remote switch). Is the POWER-LED still blinking? YES NO Pcba-POWER-SUB1 is out of order.(Only LT-3780D) Pcba-POWER-SUB2 is out of order.(Only LT-3280D) The inverter circuit of LCD- panel is out of order.

#### **☆Short2 mode:** The POWER-LED blinking is 2 times within a cycle.

# (B) In case of the POWER-LED lighting

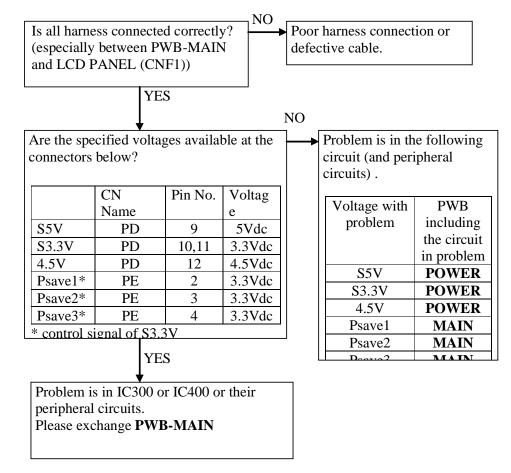

#### 2. No picture displayed and picture errors.

Note ) It applies when there is no screen display or an unusual screen is outputted, although 24V(Voltage between pin4(GND) and pin6(24V) of Connecter-PC) from PWB-POWER is outputted normally and the back light is turned on.

\*Input source changes in following order with DEVICE UP button of remote control or DEVICE button of front switch.

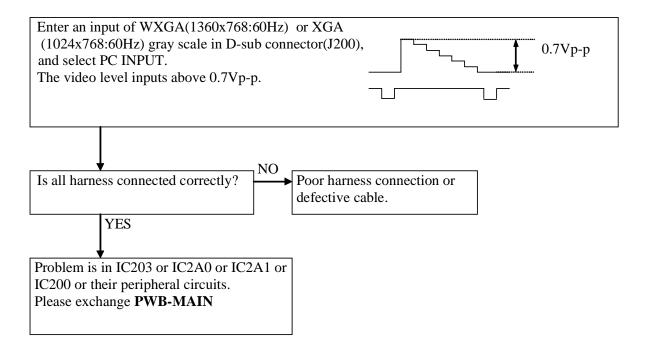

## 2-1. No picture displayed and picture errors of all input.

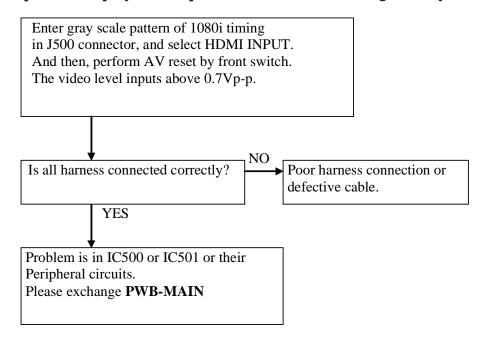

<sup>\*</sup>When it cannot still fix, it may have a problem with LCD-Module.

## 2-2. No picture displayed and picture errors of PC signal only.

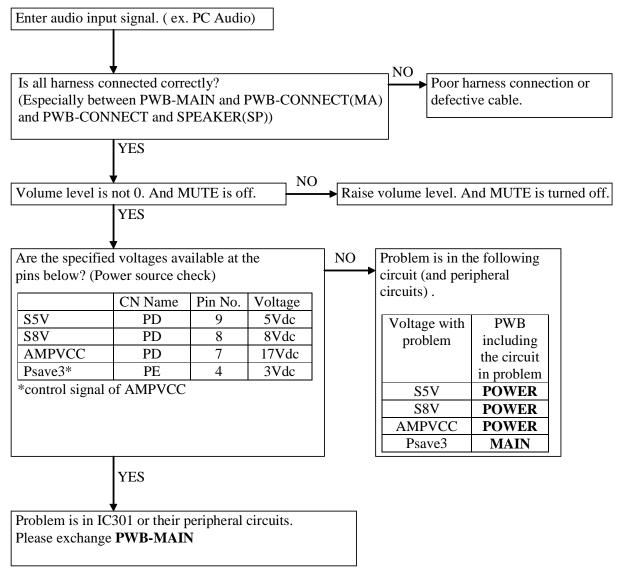

### 2-3. No picture displayed and picture errors of HDMI signal only.

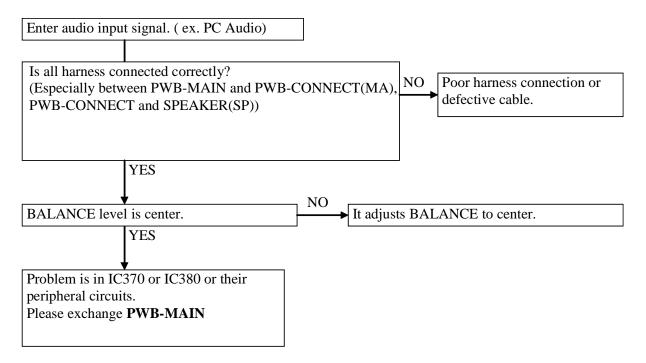

#### 3. No audio output generated.

### 3-1. No all audio output generated.

<sup>\*</sup>When it cannot still fix, it may have a problem with SPEAKER.

#### 3-2. No each(L or R) of audio output generated.

#### 3-3. No HDMI audio output generated.

In case of no HDMI audio output generates, problem is in IC500 or IC302 or their peripheral Circuits. Please exchange **PWB-MAIN**.

#### 3-4. No PC audio output generated.

In case of no PC audio output generates, problem is in J304 or their peripheral circuits. Please exchange **PWB-MAIN**.

### 3-5. When you turn up volume(over 50), there is noise from speaker.

Please exchange the parts of **PWB-MAIN** as below.

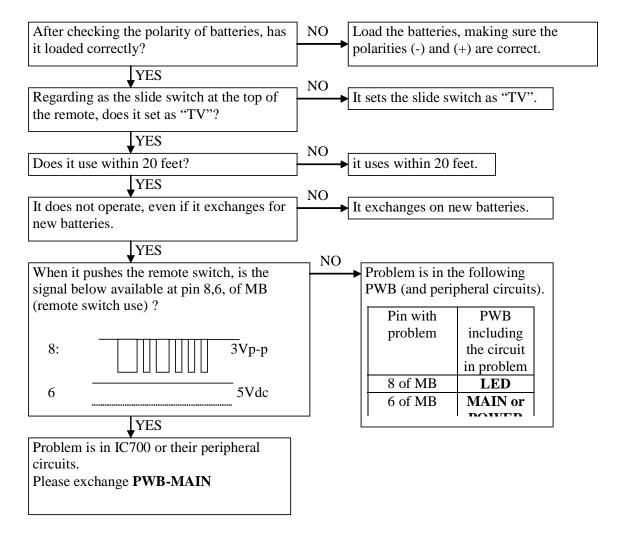

C37A and C38A: from 220 £F to 470 £F C371 and C381: from 0.47 £F to 0.1 £F

If PWB-CONNECT number is "211A77601", please exchange this PWB-CONNECT to the PWB-CONNECT that number is "211A84201".

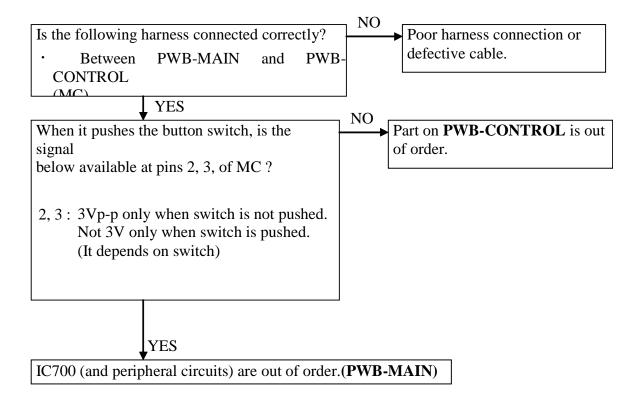

#### 4. Other faults

Notes) It considers the case where there are problems except 1, 2, 3.

#### 4-1. Remote control is not effective.

#### 4-2. Button switch is not effective.
